## Single-Handle Lavatory Faucet Installation

### INSTALLATION MANUAL Tools You Will Need:

Adjustable wrench

Hexagon wrench

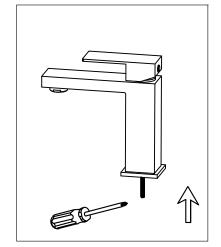

Philips Screwdriver

#### Notes before installation:

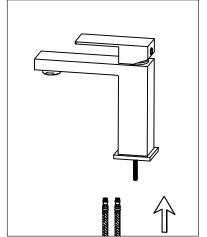

- 1.Please check that all components are present.
- 2.Before installation ensure that all feed lines are clear of debris and on/off valve is present.
- 3.Ensure water pressure is between 20-125 PSI (includes combination of hot and cold feed lines).
- 4.Pictures in the manual are general in content and may not represent exactly your purchased faucet. If you are having difficulties please contact a professional plumber.
- 5.If you will be away from home for an extended period you should shut off the main water supply.

### Daily maintenance

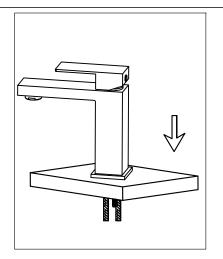

- 1.Use a soft cloth and vinegar to remove hard-water spots.
- Check aerator(if present) regularly for calcium build up are when water stream is not optimum.
- 3.DO NOT use caustic cleaning products as the use will break down finish and will void the product warranty.
- 4.Acceptable cleaners include vinegar or mild non-abrasive liquid detergents.
- 5.If the water pressure appears to be less than optimum remove, inspect, clean or replace aerator.

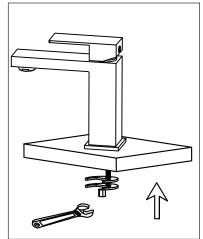

1. Screw the mounting stud with screw-driver to the faucet.

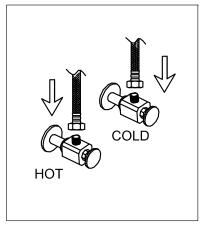

2. Screw and hand tighten the hot and cold flexible hoses to the faucet.DO NOT use a wrench to tighten hoses as this may damage the hose and/or the hose threads.

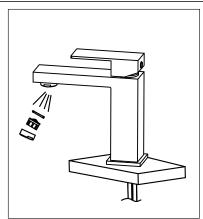

3. Install faucet through center hole.

4. Place mounting hardware over mounting stud under sink. Secure with mounting nut. Tighten mounting nut securely.

5. Attach flexible hose to water supply.

6. Remove the aerator and turn on faucet for 1-minute to flush debris from faucet and feed lines. Turn faucet off and re-install aerator.
